

# DUST MINIMIZER

**\*Patented in Canada & USA**

Our **Dust Minimizer** is designed to keep a pickup box with a camper or other covers, cleaner.

A pickup with a top or cover, creates a vacuum in the box as it travels down roads and the dust that is created, is sucked into the bed through every hole and vent in it, which makes for a dusty mess.

We have a kit that diverts the filtered air, from the cab heater and air conditioner, into the box: to pressurize it: thus preventing a negative pressure, keeping it cleaner.

The kit, once installed also helps keep truck box content warmer in winter, or cooler in summer.

***\*With Dust Minimizer***

***\*Without Dust Minimizer***

*\* The kit consists of a flexible seal for between the cab and box of the pickup, and a perforated grill to cover the hole cut in the box; and may contain a seal for around the tailgate, depending on application.*
